1 EUT Details

1.1 General

The EUT was a TETRA Voice + Data Hand Portable .

The device can transmit and receive over the following frequency band:

450MHz to 470MHz.

The nominal output power is 30dBm (1W).

The device can transmit in Trunked Mode Operation (TMO mode) or Direct Mode Operation (DMO mode)

The device has already been certified to FCC part 90 using the specific parts designed to accomodate Tetra devices. This allows a 22kHz occupied bandwidth.

The manufacturer is now seeking certification for other parts (e.g. Part 22) which specify 25kHz channel spacing but a bandwidth of 20kHz.

This unit tested under this report differs from the Part 90 approved product in that the software has been changed to support a new filter structure thus ensuring the product can meet the FCC requirements for 20kHz bandwidth. In all other aspects, the product remains unchanged.

This report is limited to measurements of occupied bandwidth with this new filter structure.

Measurements were made at the top, near middle and bottom of the appropriate frequency range:

Bottom: 450 MHz
Middle: 460 MHz
Top: 470 MHz

This Report shows that the EUT met the 20kHz occupied bandwidth measurement.

Details of the EUT and associated peripherals used during the tests are listed below.

Item	Manufacturer	Model	Description	Serial No:	Notes
1	Sepura PLC	STP8X040	TETRA Hand Portable	1PR501636G9C6ZB	
2	Sepura PLC	300-00879	STP8X USB Programming Lead	A60142	
3	Dell	Latitude E6400	Laptop PC

	Test No: T5599	Test Report	Page: 6 of 14

1.2 Modifications to EUT and Peripherals

Details of any modifications that were required to achieve compliance are listed below. The modification numbers are referred to in the results sections as appropriate.

Mod No:	Details	Implemented for
0	As received from the manufacturer on 22nd December 2016	

1.3 EUT Operating Modes

The EUT was tested in the following operating mode or modes. Generally, operating modes are chosen that will exercise the functions of the EUT as fully as possible and in a manner likely to produce maximum emission levels or susceptibility. Individual test result sheets reference the operating mode of the EUT.

Operating Mode	Details
1	Transmitting on full power on the selected channel.

2 Test Equipment

The test equipment used during the tests was one or more of the items listed below. Individual test result sheets indicate which items were used.

Ref No:	Details	Serial Number
R8	Agilent E7405A Spectrum Analyser	MY44212494

	Report No: R3572 Issue No: 1	FCC ID: XX6STP8X	
	Test No: T5599	Test Report	Page: 10 of 14

3 Test Methods

3.1 Antenna Conducted Occupied Bandwidth

Measurements are made with the antenna output connected to a spectrum analyser via a suitable PAD. Sweeps are made with a 300Hz Resolution Bandwidth and a 1kHz Video Bandwidth. A peak detector is used. Markers are used to determine the 99% power bandwidth.

4 Test Results

The following sections contain tabulated test results. Plots of various scans are included at the back of this section.
